

A network is made up of different devices.

When a file is shared, it travels through these devices on the network.

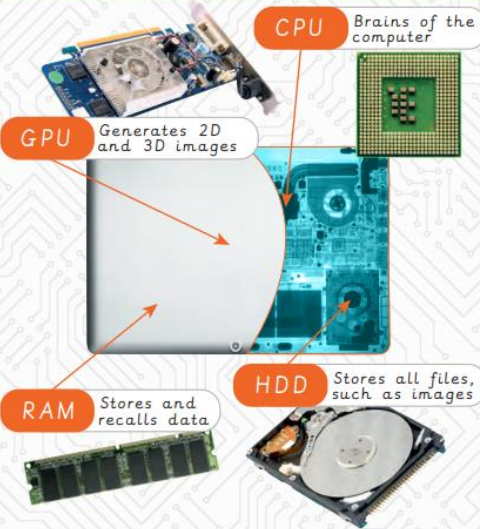

Different files can be sent through a network, including music, videos and photos.

When a user requests a website, the server retrieves its stored data and sends it back as the displayed website.

Computer parts inside of a laptop:

Other portable electronic devices:

hard drive	CPU	GPU
ROM	The Cloud	server
network	network switch	wireless access point
internet	wifi	wireless
RAM	computer	file
	tablet
